Career Potential:

The financial services program includes professional field courses in investments, principles of insurance, employee benefit programs, federal taxation, and estate planning. While studying in these areas, you may take courses in financial markets and institutions, international finance, real estate finance, and real estate investments. You also may study financial statement analysis, legal organizations and financial transactions, special topics in investments, life insurance, and property and liability insurance.

Professionals in financial services use their expertise in investment planning, insurance and risk management, federal taxation, estate and trust planning, retirement planning, employee benefit planning, financial management, accounting, economics, mathematics and statistics to help clients maximize and conserve their wealth.

By studying financial services, you may become a Certified Financial Planner^T (CFP) or financial manager for a business, government agency or nonprofit organization. You may work for a brokerage house as a stockbroker. Or you could own a private practice.
